## PRESSURE SUSTAINING ELECTROVALVE

A CAREFUL VALVE DESIGN, THE NATURE OF THE COMPONENTS USED IN THEIR MANUFACTURE PROCESS, ADDED TO OUR STRICT QUALITY CONTROL TECHNIQUES, ALLOWS US TO OFFER A WIDE RANGE OF RELIABLE AND HIGH QUALITY PRODUCTS

### Connection type and diameter

- 1 ½" to 3" thread
- 3" to 12" flange

### MAIN FEATURES

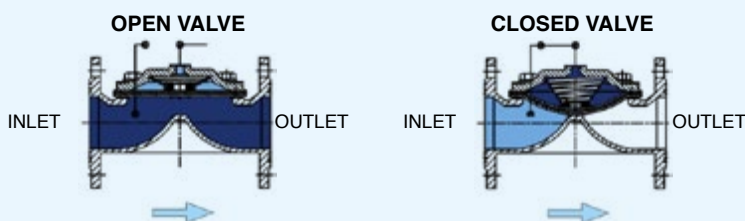

- High resistance to operation and exposure conditions. Anti-corrosion epoxy-polyester coating.
- Chemical and mechanical resistant diaphragm with low opening pressure.
- Wide regulation range.
- Accurate and stable regulation.
- Low head loss.
- Easy maintenance.
- Bidirectional valve.

For filtration equipment applications, please consult technical datasheet "Special Sustaining valve kit for filtration equipment".

### HOW DO THEY WORK

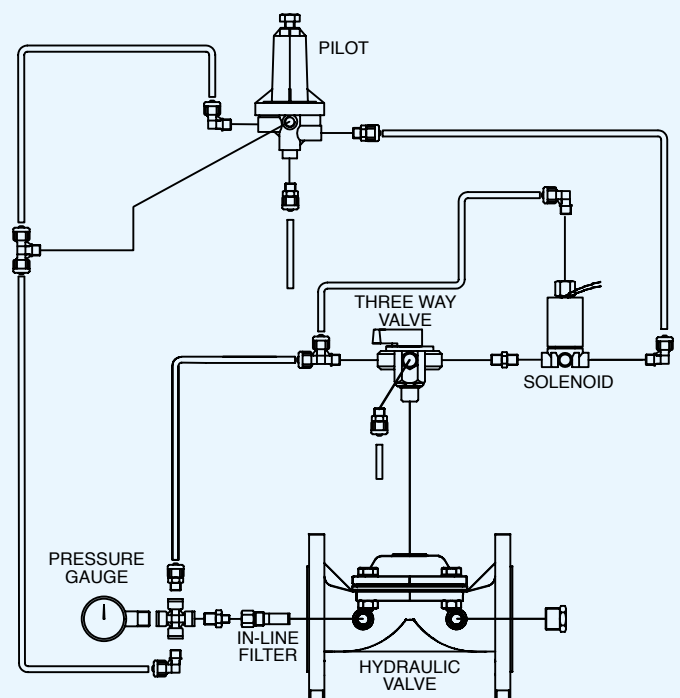

Two-way metallic hydraulic valve, which incorporates a three position selector valve and a three-way pilot, made of technical plastic material, and a NO three-way solenoid valve.

The valve remains closed as long as the solenoid is not energized. When electrically activating the solenoid, it regulates continuously the position of the diaphragm through the water inlet/outlet of the chamber to ensure that the pressure value upstream of the valve does not reach lower values than those regulated in the pilot.

### APPLICATIONS

- Automation of irrigation systems, industrial processes and hydraulic applications in municipal facilities.
- Controlling the pipe filling time.
- Avoiding flow rates higher than design flow rate.
